# **1** Application

## 1.1 Generation Side

The wind and solar energy have features of seasonality and temporality. When a large amount of wind and solar generated electricity power connect to the power grid simultaneously, it may cause power surplus problem, which could lead to solar & wind power abandonment. The addition of BESS on the side of renewable energy generation can solve these problems well by the way to store the electricity that could not be consumed and discharge it at the time of insufficient power generation or peak consumption, so as to smooth the generation of electricity, make up for the defects of unstable renewable energy power generation and avoid waste of power.

## Features

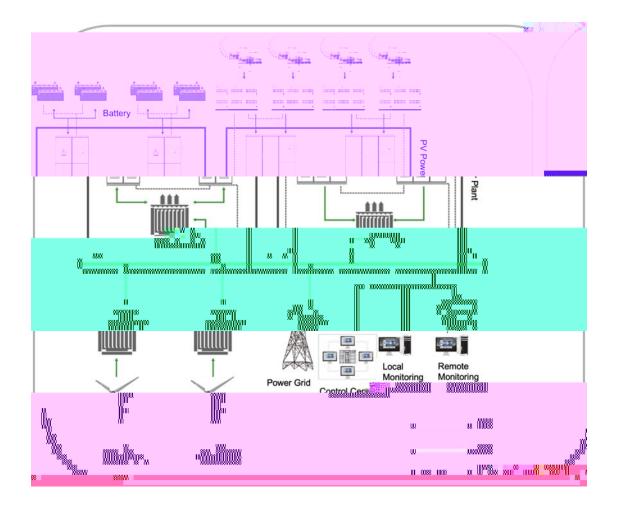

- ♦ High Efficiency
- ♦ Lower Investment
- ♦ Middle & Small System suitable

## Products

E5023 Series Container Energy Storage System

## 1.1.2 AC Busbar Solution

#### Features

- Reduce the solar & wind power abandonment
- ♦ Smooth energy output
- ♦ Dispatching flexible
- Fast Response to dispatching command
- Enhance the stability & plannability when connected to the power grid
- ♦ Suitable to Middle & Large System

## Products

E5020-500-12 E5020-630-12 E5022-1725-10 E5030-(6-35)/2500 E5030-(6-35)/3450 Container Energy Storage System

## 1.1.3 Thermal and BESS Joint Frequency Regulation Solution

At the level of power production and operation, with large thermal power units as the main frequency regulation resources, a large number of thermal power units bear the heavy AGC adjustment task for a long time, resulting in a series of negative effects such as increased coal consumption and serious equipment wear. Because of the fast frequency regulation speed and adjustable capacity, BESS becomes a very good frequency regulation resource. After adding BESS in thermal power plant, it can effectively improve Kp (power reserve coefficient) value in practical application, reduce the loss of thermal units as the frequent regulation, and increase the flexibility of unit operation.

#### Features

- ♦ Slow down thermal power unit wear
- ♦ Prolong unit life
- ♦ Increase power plant income
- ♦ Ability as black start power supply
- Improve the reliability of power supply system

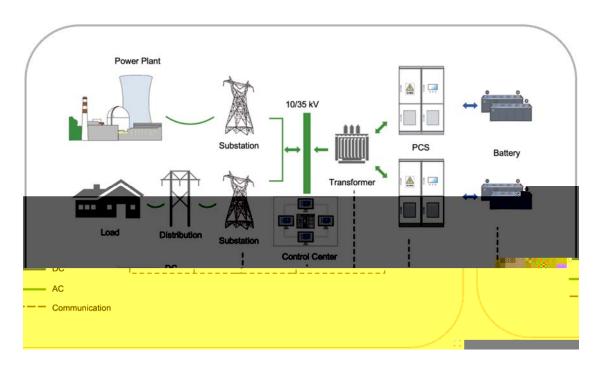

## Products

E5020-500-12 E5020-630-12 E5022-1725-10

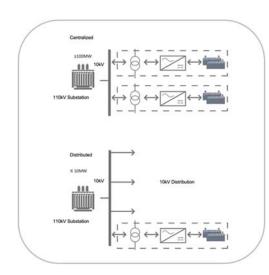

## 1.2 Power Grid Side

In recent years, the peak-valley difference of power grid load has increased year by year, the installed capacity of renewable energy has been increasing, the load has repeatedly reached a new high, and the peak regulation pressure is large. The power grid side BESS solution effectively solves the problems of poor power grid regulation capacity and weak distribution power grid construction through frequency regulation and peak regulation on the power grid side.

## Layout Mode

## Features

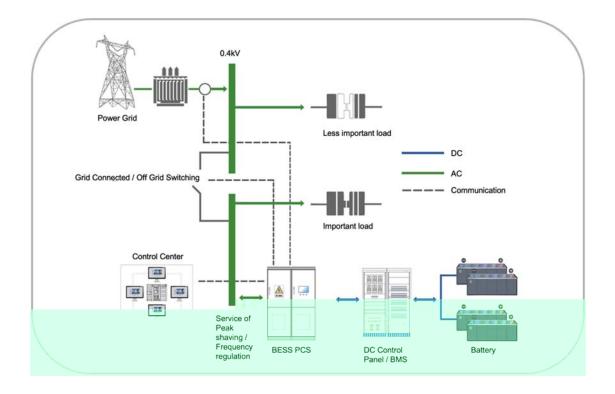

- ♦ Defer the power grid expansion
- ♦ Improve the stability of the power grid
- ♦ Dynamic response speed is fast
- ♦ Improve power quality
- Assist renewable energy grid connection
- ♦ Emergency reserve
- ♦ Reduce line loss

## Products

E5020-500-12 E5020-630-12 E5022-1725-10 E5030-(6-35)/2500 E5030-(6-35)/3450 Container Energy Storage System

## 1.3 Users Side

## 1.3.1 Industrial/Commercial BESS Solution

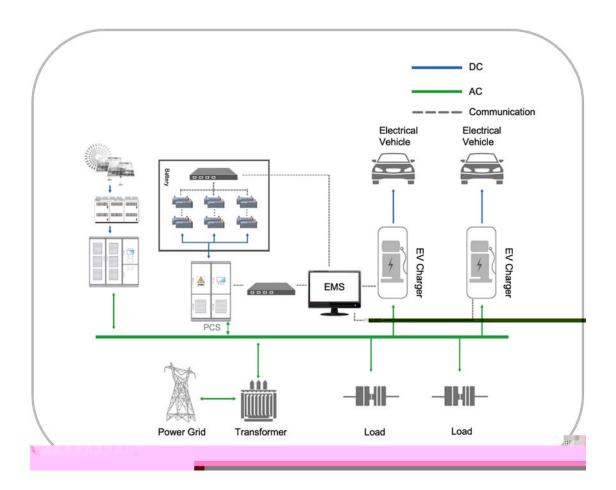

## Suitable to

- ♦ Shopping mall
- ♦ Workshop
- ♦ Enterprise
- ♦ Smart building

## Features

- ♦ AC grid, easy to connect
- Highly integrated, flexible layout, small space needed
- ♦ Peak shaving
- ♦ Reduce demand electricity cost
- ♦ Smooth load
- ♦ Defer capacity expansion
- ♦ Emergency power supply

## 1.3.2 Photovoltaic-BESS-Charging Solution

## Suitable to

- ♦ Industrial Park
- ♦ Shopping Mall
- ♦ Workshop
- ♦ Enterprise

.....

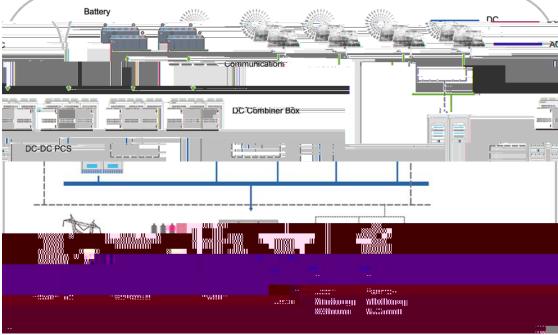

## Features

- ♦ Improve power quality
- ♦ Smooth charging peak current
- Highly integrated, flexible layout, small space needed
- ♦ Peak shaving
- ♦ Reduce demand electricity cost
- ♦ Smooth load
- ♦ Defer capacity expansion
- ♦ Emergency power supply

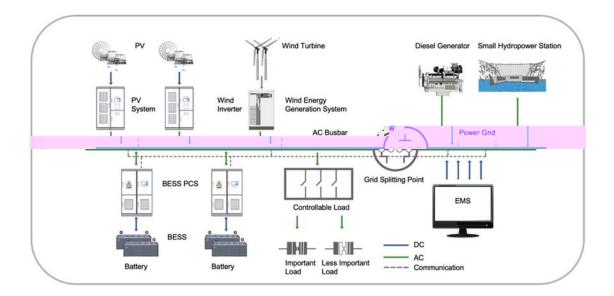

## 1.4 Micro-Grid

# 1.4.1 DC Busbar Solution

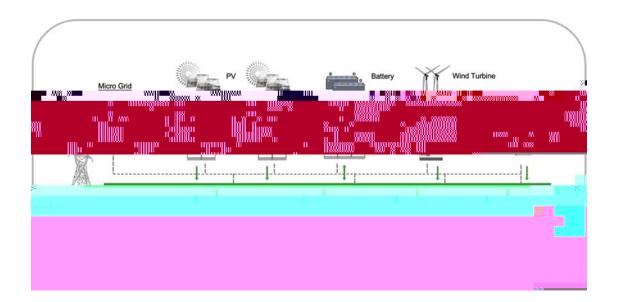

## 1.4.2 AC Busbar Solution

## 1.4.3 No-Power Area Solution

## Suitable to

- ♦ Remote and no power area
- ♦ Island
- ♦ Industrial park

## Features

- ♦ Multi-energy complementation
- ♦ Improve power quality
- Highly integrated, flexible layout, small space needed
- ♦ Smooth load
- ♦ Emergency power supply

## 2 PRODUCT

## 2.1 E5020 1000V Power Conversion System (PCS)

## Functions

- Smooth the fluctuation of renewable energy generation
- Assist frequency regulation in thermal power plants
- User side TOU (Time Of Use) price management, capacity cost management
- Improve power supply reliability and power quality in microgrid

## 2.2 E5030 1000V Battery-PCS-Step-up Transformer All-in-one

## System

## Features

- ↔ Highly integrated, unified interface, reasonable and efficient layout
- ♦ The step-up voltage covers 35kV and below
- ♦ Support multi-machine parallel
- ♦ 1000V system wide DC voltage range
- ♦ With 1P54 protection level, it can adapt to a variety of outdoor scenes
- ♦ Battery and PCS cabinets are designed in separate compartments, east to maintain
- ♦ Compatible with various power levels and flexible configuration of various capacities

## 2.3 E5022 1500V Power Conversion System (PCS)

## Functions

- Smooth the fluctuation of renewable energy generation
- Assist frequency regulation in thermal power plants

- User side TOU (Time Of Use) price management, capacity cost management
- Improve power supply reliability and power quality in microgrid

## Features

- The string design enables one-to-one accurate management of battery clusters
- Adopt high-performance, highly reliable protection and control platform
- Adopt high-quality components to ensure safe and reliable operation of the equipment
- High precision PQ decoupling control and virtual synchronous generator control algorithm are adopted
- Perfect and reliable protection function
- CAN, RS485, Ethernet and other communication interfaces, easy to connect with various communication methods

## 2.5 E5021 Modular Power Conversion System (PCS)

## Features

- Battery configuration is flexible and scalable
- Integrated structure, simple, beautiful, easy to install
- Adopt high-performance, highly reliable control and protection platform

- Adopt high-quality components to ensure safe and reliable operation of the equipment
- Adopt high precision sampling and advanced and flexible control algorithm
- Perfect and reliable protection function
- CAN, RS485, Ethernet and other communication interfaces, easy to connect with various communication methods
- Suitable for high altitude applications (less than 6000 m, derating over 2500 m)

## 2.7 E5030 Compact All-in-one BESS

## Features

- Integrates PCS, EMS and battery systems to perfectly adapt to various application scenarios
- With 1P54 protection grade, it can adapt to a variety of outdoor environments
- Battery and PCS compartment separately design, easy to maintain
- ♦ Smaller size, compact design and higher power density

## 2.8 Industrial & Commercial Compact BESS

Industrial & commercial compact BESS adopts modular design, improves system voltage through series battery modules, and expands capacity in parallel with multiple cabinets.

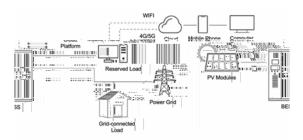

The products are suitable for microgrid, industrial and commercial energy storage and other scenarios, can be compatible with different system architectures such as grid-connected and off-grid. With double leakage protection and AC/DC hardware isolation design, it is safer for users.

Inverter convection heat dissipation design, more friendly to high temperature working environment.

Thin and light design, easy to be installed.

Equipped with an intelligent network monitoring platform and APP, easy to monitor real-time operation status.

Built-in DC/AC safety isolation system for easy transportation and installation.

## 2.9 Stacked House BESS

Stacked house BESS adopts modular design, the product is serial-connected through the battery module series to improve the system voltage and capacity, can match a variety of brands of inverters.

The inverter can be connected to the solar photovoltaic power generation system, and can connect 2 MPPT channels, compatible with up to 6kW PV input power.

With double leakage protection and AC/DC hardware isolation design, it is safer for users.

Convection heat dissipation design, more friendly to high temperature working environment.

Equipped with an intelligent network monitoring platform and APP, easy to monitor the real-time operation status.

Built-in DC/AC safety isolation system for easy transportation and installation.

Thin and light design, better experience.

## 2.10 Integrated House BESS

The integrated house energy storage

system integrates the battery management

power

local

conversion

monitoring

system(BMS),

system(PCS),

system(EMS), air conditioning, fire protection, power distribution and other devices in the energy storage outdoor cabinet, and adopts a modular design to create low-carbon and high-yield solutions for different application scenarios.

The inverter can be connected to the solar photovoltaic power generation system, and can connect 2 MPPT channels, compatible with up to 6kW PV input power.

With double leakage protection and AC/DC hardware isolation design, it is safer for users.

Convection heat dissipation design, more friendly to high temperature working environment.

Equipped with an intelligent network monitoring platform and APP, easy to monitor real-time operation status.

Built-in DC/AC safety isolation system for easy transportation and installation.

Thin and light design, better experience

## 2.11 Wind-PV-Storage-Charging All-in-one System

## Suitable to

- ♦ Industrial and Commercial Enterprise
- ♦ PV system for Green House
- ♦ DC system for Island
- ♦ DC system for Industrial Park

## Functions

- Urban green building Photovoltaic -Energy storage-DC flexible power supply
- Energy Storage in smart power distribution area
- ♦ Field power supply
- Oilfield power supply and energy saving
- Distributed energy DC coupled gridconnected power supply
- Multiple energy sources complement each other comprehensively
- ♦ Emergency power supply

## Features

- Be used to build DC system: It will interconnect various energy sources to achieve comprehensive utilization and reduce the pressure caused by the rapid expansion of the power grid.
- Standard Interface: It can connect wind power, photovoltaic, energy storage battery, V2G and other equipment through standardized interface. And the DC output parameters can be adjusted.
- Wide volage range design: Photovoltaic input port, wind power input port, battery input port voltage range is wide.
- DC bus Micro-Grid can be constructed with high efficiency and good economy.

## 2.12 Liquid Cooling Energy Storage System

#### Suitable to

- ♦ Power generation side
- ♦ Power grid side
- ♦ User side
- ♦ Micro-grid system

#### Functions

- ♦ Peak shaving
- ♦ Smooth output
- Peak regulation and frequency regulation
- ♦ Emergency power supply

#### Features

- IP54 protection grade for outdoor applications
- Prevention based fire fighting strategy with independent fire fighting system
- ↔ Highly integrated, modular design, 1000V/1500V system
- Electric and battery separation design, easy to maintain
- Non-walk-in/modular highly integrated design saves 35% space
- The liquid cooling extreme temperature control system is adopted, and the temperature difference of the battery cell inside the battery cluster is less than 3

## Features

- Master-slave three-layer architecture BMS, stable link
- Multilevel protection: pack, cluster, array, and system are all protected
- Intelligent air conditioning control, so that it can work efficiently, reduce system losses, extend life
- Integrated design, unified external interface
- ♦ A 45-foot container can contain 5MWh

Battery	Module	
C-Rate	1C	
Cell Type	LFP	
Cell Capacity	280Ah	
Combination Mode	1P16S	
Rated capacity	280Ah	
Rated Energy	14.336kHh	
Nominal Voltage	51.2V	
Battery	v Cluster	
Arrangement	One cluster with three Columns	
Cell Capacity	280Ah	
Combine Mode	1P400S	
Key Components	25 Battery Modules, 1 High Voltage	
	Cabinet	
C-Rate	1C	
Rated Capacity	280Ah	
Rated Energy	358.4kWh	
Nominal Voltage	1280V	
Operation Voltage Range	1000V~1460V	
Battery	System	
Arrangement	2 array, 7 clusters per array	
Cell Capacity	280Ah	
C-Rate	1C	
Array Mode	7P400S*2 arrays	
Rated Capacity	1960Ah*2 arrays	
Rated Energy	5017.6kWh	
Nominal Voltage	1280V	
Operation Voltage Range	1000V~1460V	
Dimension	13716mm*2896mm*2438mm	
Weight(T)	55	
Operation Temperature Range	-30 ~50	
Store Temperature Range	-30 ~55	
Maximum Operation Altitude	4000	
Battery Temperature Control Mode	Industrial Air Conditioner	
Fire Fighting System	Heptafluoropropane	
Interface	Ethernet	
Protocol	Modbus RTU/Modbus TCP/IEC104	
IP	IP54

## 2.14 Energy Management System (EMS)

## Features

- ♦ Integrated architecture design
- ♦ Good adaptability to power grid
- ♦ Plenty of control way
- ♦ Flexible control mode
- ♦ Accuracy control
- ♦ Blocking function

#### Functions

- ♦ Primary frequency regulation
- ♦ Smooth and stable control
- ♦ AGC/AVC control
- ♦ SOC automatic maintenance
- Automatic grid-connected and off-grid switching
- ♦ Planned operation control
- ♦ Anti-reverse current control
- ♦ Data acquisition and monitoring

EMS		
Accuracy of the control operation	100%	
Accuracy of the remote control	100%	
Pass rate of measurement value	100%	
System availability	100%	
МТВБ	20000h	
Sampling interval in historical curve	1-60Min	
	(Adjustable)	
Daily & monthly report storage time in historical curve	1 Year	
Maximum recovery time of the whole station system	5Min	
Transmission time for digital input change	<1Min	
Transmission time for digital output and analog output command	<2Min	
Real-time data scanning interval	1-10s	
	(Adjustable)	
Real-time data transfer time in computer remote network	<10s	
communication		
Graphics call response time	<2s	
Real-time data refresh cycle on the graphics	2~10s	
	(Adjustable)
